

PDF Feature Test Document

This page contains native (born-digital) text, an embedded raster image, and a vector chart drawn with PDF path operators. The text on this page is fully selectable and extractable. Page 2 is a simulated scan with an OCR text layer. Page 3 is a simulated scan with NO text layer.

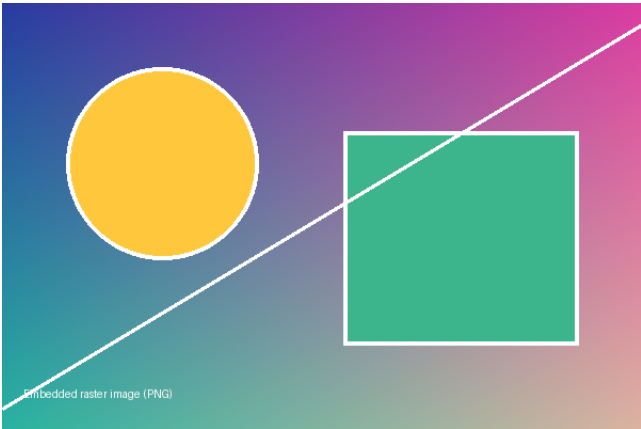

Figure 1: Embedded raster image

Vector Bar Chart (Q1-Q4)

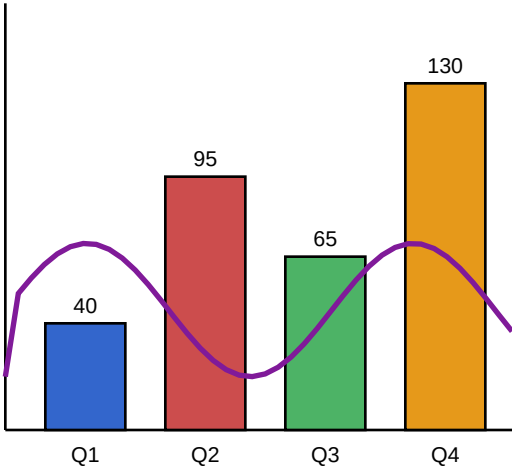

Figure 2: Vector chart (paths, no raster)

Additional body text for extraction testing. The quick brown fox jumps over the lazy dog. 0123456789. Special characters: @#\$%&*() — em dash, “quotes”.

Scanned Page - With OCR Layer

This page simulates a scanned document. It was rendered to a raster image with noise, blur, and a slight rotation, then run through the Tesseract OCR engine. An invisible text layer was placed over the image, so this text is searchable and can be selected and copied even though the page itself is a picture.

OCR test phrases: The quick brown fox jumps over the lazy dog.
Numbers: 1234567890. Date: June 10, 2026. Amount: \$4,815.16

Scanned Page - No OCR Layer

This page is also a simulated scan, but no OCR was performed. There is no text layer at all: attempting to select, search, or extract text from this page should return nothing. Any text you can read here exists only as pixels in the page image.

Non-OCR test phrases: Pack my box with five dozen liquor jugs.
Reference code: ZX-9472-QQ / Batch 0042
